## PORTABLE FORCE PLATES

### FROM FUNCTIONAL ASSESSMENT TO ADVANCED JUMP ANALYSIS

In addition to **balance, postural control, and stability assessments**, they enable **dynamic jump analysis** to measure **force, power, neuromuscular reactivity, landing and take-off mechanics**, and to establish a precise **force-velocity profile**.

Thanks to their **large surface area**, they provide a safe environment for performing tests ranging from **squats to repeated jumps**, in **single-leg or double-leg stance**, as well as standard jump protocols such as the **CMJ (Countermovement Jump)** and the **Squat Jump**.

**Connected and portable**, they are designed for both **rehabilitation** and **sports performance optimization**. They deliver **high-frequency data with real-time feedback** to objectively track progress, identify asymmetries, and support **return-to-sport decision-making**.

## PRODUCT BENEFITS

### 01 Dynamic performance assessment

Perform a wide variety of dynamic exercises (squats, push-ups, functional movements) with real-time biofeedback on force distribution in single-leg or double-leg stance.

### 02 Large surface for complex movements

The enlarged surface provides greater comfort and versatility, allowing more complex and natural movement patterns that require additional space.

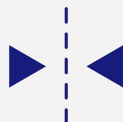

### 03 Loaded assessments

Thanks to their high load capacity, the K-Deltas Large allow loaded assessments (squats, loaded isometric exercises), making them ideal for athletes and advanced rehabilitation phases.

### 04 Advanced balance analysis

Assess balance using key indicators such as center of pressure (CoP), sway velocity, and landing forces, under safe and controlled conditions.

### 05 Strength and symmetry testing

Perform strength and symmetry tests such as the ASH test, isometric bridge, or IMTP, to accurately identify muscle imbalances.

### 06 Advanced jump analysis

Access a comprehensive jump analysis including jump height, velocity, ground reaction force (GRF), power, and displacement, with excellent reliability even during repeated jumps.
